When you don't have time to spare.

\$30 for a 30 minute treatment.

Dr. Peter C. Grothaus *Dr. Laura L. Bennett*

From the Doctors...

Tired of waxing, shaving or plucking? Winter is the perfect time to treat unwanted facial and body hair.

Hair reduction treatments are most effective when skin is not exposed to sunlight, making the winter months ideal for laser hair removal treatments. Laser hair reduction can treat pigmented hair of the face, armpits, bikini, back or legs.

The light penetrates the skin, targeting and heating the hair follicle. Hair growth is cyclical so a series of treatments are necessary in order to treat the different hair follicles producing hair. Usually appointments are scheduled every 4-6 weeks for a series of 5 treatments. Some locations take longer to treat, some less.

Call and make your appointment today and say "Good-bye" to razor burn! And get ready for the easiest swimsuit season yet.

What's New at Image Sculptors...

Coming Soon! In January we will have a treatment for some of those annoying skin problems like clogged pores, skin tags, milia, sebaceous hyperplasia, keratoses, and cherry angiomas. The Lam Probe uses high frequency radio waves to remove the lesions usually with little to no anesthetic required.

The down time depends on the areas that need to be treated, but you can expect two to four weeks of healing time with this. **The treatments are quick and easy! They can be added to your facial or scheduled as a stand alone treatment.**
